

# LISTEN TO THE EXPERTS.

The **Accent™ XL Dual Mode RF System** is the first device to provide **Volumetric RF Thermotherapy**, the most advanced technology available in aesthetic medicine. But don't take our word for it. Here's what a few of your distinguished colleagues had to say about their experience with the new Accent™ XL system from Alma Lasers™.

**Macrene Alexiades-Armenakas, MD**

"I found the Accent system to be superior to prior generations of RF technology in the treatment of skin laxity, particularly on the neck. It is also a remarkable breakthrough that the system is painless and requires no anesthesia. Accent treatments can be performed rapidly with no downtime and can be applied concurrently with other non-ablative modalities, such as injectables to achieve better results in the 'non-surgical facelift.' Immediate skin tightening is evident and the results are often considered striking."

**Steven Bloch, MD**

"I think the Accent system definitely has its place in the world. I even used it successfully to contour the face of a patient who had reconstructive surgery. As a non-invasive treatment, it's the most effective technology on the market right now."

**Michael Gold, MD**

"We found that both the BiPolar and UniPolar' modes of the Accent system increased skin tightening of the neck and the peri-orbital and peri-oral regions of the face. Unlike similar technology, the Accent does something in almost everyone."

**David Goldberg, MD**

**Flor Ana Mayoral, MD**

“We have a winner here! The Accent system is easy to use, not painful and well tolerated. In fact, one of my patients was so impressed with her results, she actually asked for a ‘membership’ with the Accent.”

**David McDaniel, MD**

“We have found the Accent system to be very safe and relatively comfortable with a high percentage of responders. Compared to other RF devices we have used, treatment with the Accent system is much less painful, faster and easier to perform. It also allows more ‘artistic’ use on the face. Although responses vary, a high percentage of treated subjects showed a visible response. Some observe an immediate skin tightening of the face.”

**Peter Rulan, MD**

“The Accent system is superb. As a non-invasive therapy, no anesthesia is required. In fact, an overwhelming majority of my patients thought that treatments with the Accent system were painless.”

**Ava Shamban, MD**

“Compared to previous RF technologies in aesthetic medicine, I found the Accent system to be faster and less painful. No consumables are required, making treatments simpler and more efficient than in the past. More importantly, the Accent system raises the bar in patient comfort and satisfaction in aesthetic procedures.”

**Maurice Sherman, MD**

“We obtained remarkably good results with the Accent system. It was consistent for all of the patients that followed the protocol. All of them showed an improvement. Some dramatic, some moderate, but every patient expressed satisfaction with the results. Everyone said that their skin felt tighter the day after the first treatment. Of all the RF systems on the market today, I feel the Accent is the most effective technology out there.”
